ABBREVIATIONS

A=mark made at altitude (above 1,000 meters); h=hand-timed; +=mark converted from yards (meters) and/or hand to automatic; before names, *=junior; **=sophomore; ***=freshman, etc.; i=indoors; y=yards.

TIMING

Where applicable, hand times (in tenths) have been placed on the automatic timing lists in positions of relative "value" by adding a conversion factor of either 0.24 (100, 200, 110H, etc.) or 0.14 (400, 400H). For longer distances no conversion is applied.

CONVERSIONS

I have adopted a policy of converting yards to meters (or vice versa) based upon a ratio between the equivalent yard and metric distance (i.e., 200m to 220y, 400m to 440y, etc.). Therefore, all conversions from yards to meters use the ratio .994194 multiplied by the time (in seconds). The resultant number is then rounded to the next higher tenth or hundredth of a second depending upon the timing system used. This produces conversions, which in most cases, are identical to those used for many years (i.e., 220y to 200m, -0.1; 440y to 400m, -0.3, etc.). Other conversions: 120yH to 110mH, +0.04 (auto only).
